

**REMARKS**

Representatively, the latter two paragraphs in the Objects And Summary Of The Invention Section have been moved, as appropriate, to the Detailed Description Of The Preferred Embodiments Section, toward the end thereof. In addition, the language "adherence of the active ingredient ***on*** the article" (bold emphasis added) has been amended to read -- adherence of the active ingredient to the article -- throughout the Application. Also, "or partially or wholly, impregnating" has been amended to correctly read -- or partially or wholly impregnating --. Furthermore, "elementary sulphur" has been changed to -- elemental sulphur --, "active principle" now reads -- active ingredient --, and generically "2  $\div$  5 g/l" and like ranges have been modified to read -- about 2 g/l to about 5 g/l --, collectively, to better define the invention without limiting effect.

Overall, the Specification, Abstract, and Claims are amended to further comport with U.S. practice and, in so doing, to better define the invention without limiting effect, for clarity, consistency, and as a matter of desired style.

Respectfully submitted,

Dated: April 12, 2010
